

NURSULTAN SARSENBAY

+7 705 408 0664 | sarsennbaj.n@gmail.com | github.com/nurssk

PROFILE

Full-stack developer building production-ready applications from scratch. Strong in system design, real-time architectures, and AI-integrated products. Experienced with Flutter, TypeScript, Firebase, Astro, Tailwind CSS, and modern web delivery. Focused on fast execution, scalability, and real user impact.

SKILLS

Core stack: Flutter (Dart), TypeScript / JavaScript, Astro, Tailwind CSS, Firebase (Auth, Firestore, Functions), Vercel, SQL, REST APIs.

Engineering: System design for real-time systems, API development, database design, Git.

EDUCATION

NIS PVL 2019-2025

Nazarbayev University - Foundation

Nfactorial Incubator

Association for Computing Machinery at NU - Dev, HR department member

EXPERIENCE

Founder / Product Engineer 2020 - 2024

- Built a B2B startup for vehicle speed monitoring using GPS and injector data.
- Developed a computer vision prototype using YOLO for pothole detection.
- Designed system architecture, core product logic, and implementation roadmap.
- Led the development team and drove product execution.
- Won 500,000 KZT at KT Cloud Lab, 200,000 KZT at Tech Lab, and 300,000 KZT in smaller competitions.

Hackathon Participant / Team Lead 2022 - present

- Participated in 10+ hackathons and won 7.
- Built MVPs with Flutter, Android Studio, and Astro.
- Focused on product logic, rapid prototyping, and team execution.

Startup Programs Participant 2022 - 2024

- Completed Astana Hub Startup School and participated in Teenpreneurs startup incubator.
- Winner of Astana Hub Startup Orda incubator.
- Focused on MVP development, idea validation, and pitching.

PROJECTS

Momentum Grid - AI Goal Execution System

- Architected and built a full-stack AI-powered productivity system with Flutter and Firebase.
- Designed scalable data models for goals, tasks, scheduling, analytics, and real-time Firestore updates.
- Implemented AI-driven task generation, adaptive planning with Gemini, calendar logic, heatmaps, and performance tracking.

BeUniq - AI UI Humanizer Chrome Extension

- Built a Manifest V3 Chrome extension with React, TypeScript, Vite, Tailwind CSS, and Chrome side panel APIs.
- Implemented rectangle selection, screenshot crop capture, DOM/CSS/style-token extraction, and session storage flow.
- Connected the extension to a Next.js backend with Gemini analysis, CORS, request IDs, timeout/retry, and safe debug metadata.
- Built a local AI-slop and design-quality engine with DOM/CSS detectors, landing-copy scoring, category caps, and prioritized findings.
- Integrated curated design-skill/reference packs such as Taste Skill and TypeUI to recommend layouts, templates, motion, and Cursor/Codex prompts.

BeUniq Design Skill - Codex/Claude Frontend Audit Skill

- Built a deterministic Codex/Claude skill for React, Next.js, Vite, HTML, CSS, SCSS, and Tailwind frontend audits without AI APIs or network calls.
- Implemented static analysis for source code, visible copy, class names, inline styles, and CSS declarations.
- Designed scoring for AI-slop, landing-copy slop, taste/motion craft, and design quality with pass thresholds at 20 or lower.
- Packaged 325 AI/design rules, 301 landing-copy rules, 74 legacy Uncodixify rules, and 18 code-detectable taste rules with init/check/report scripts.
- Added PRODUCT.md and DESIGN.md workflow so agents preserve product context and make targeted fixes instead of broad redesigns.
